

Abstract

Performance of payment processes, in which

- a cash register transmits a payment demand wirelessly to a mobile device of a customer,
- the latter checks the payment demand,
- if the result is positive, generates from it a payment instruction,
- transmits the latter to a payment center,
- the payment center checks the payment instruction,
- if the result is positive, the payment center sends a payment confirmation to the cash register,
- the cash register checks the payment confirmation,
- if the result is positive, indicates this and releases goods to be paid for.
